NATIONAL REF.: 170509863
TITLE : Decontamination of individuals after CBRN incidents -
Requirements for on-scene emergency decontamination
TITLE AMPLIF.: This Austrian standard describes a procedure for
emergency decontamination of individuals affected by a
CBRN incident. Definitions of required terms are
provided. Guidelines for immediate response measures to
be provided by the emergency responders first on scene
(before the arrival of specialised relief units or
equipment) are established for use. This Austrian
standard is part of an overarching inter-organisational
concept to ensure a seamless care for affected persons
while building on existing regulations, in particular
the fire-fighter strategies against hazardous
substances.

NATIONAL REF.: 170509088
TITLE : Quality criteria for training firms
TITLE AMPLIF.: A training firm is a firm belonging to a system, to
train skilled employees. It collaborates with other
training firms in a network and resigns from dealing
with real money, i.e. the exchange of goods, services
and money is virtual and without real risk. For almost
every sector there are training forms, e.g. IT-services
and catering services. Training firms and their
employees buy and sell goods and/or services on
a virtual level. Usually a training firm is divided into
different departments, e.g. marketing, financing and
sale. In Austria training firms are used to prepare or
to train the access to employment, occupational
come-back and change among other things. They are
operated by schools and by organisations for adult
vocational training.

TITLE : Fire Safety Engineering - Verification of fire safety
design in buildings
TITLE AMPLIF.: This technical specification gives a basis for
analysing fire safety design alternatives in buildings
and is supposed be adopted by practitioners, local
authorities and regulators. The aim is to enable a more
consequent and uniform performance-based design process
and to establish a set of performance criteria. It is
applicable to residential buildings, offices, schools,
hotels, public assembly hall, shops etc. The user of
this technical report must verify that the data are
applicable to the relevant design situation and that
national regulations are met

PROJECT ID. : 00025223/0001 NEW PROJECT

NATIONAL REF.: 170509030
TITLE : Eurocode 1: Actions on structures - Part 1-4: General actions - Wind actions - National specifications concerning ÖNORM EN 1991-1-4 and national supplements (Amendment)
TITLE AMPLIF.: This ÖNORM sets national requirements to EN 1991-1-4 and is for Austria to be applied jointly with the ÖNORM EN 1991-1-4. This ÖNORM set rules for the determination of natural wind actions for the design of buildings and engineering structures for each considered load platen. This part is suitable for predicting the characteristic wind loads for buildings standing on land, their components and attachments. Various aspects that need to be considered for the determination of the effects of wind on a building depend on the location and the availability and quality of meteorological data, terrain category and so on. This part contains no evidence to account for local thermal effects on the wind characteristics, such as strong Arctic inversion layers, channeling or hurricanes.

NATIONAL REF.: 170510195

TITLE : Security doors and hardware. Minimum requirements
related to protection and resistance class. Selection,
application and installation criteria.

TITLE AMPLIF.: This standard specifies the criteria for selection,
application and installation of burglar resistance
security doors from security level 3, specified in EN
1627. It applies to the door, including frame,
sash(es), hardware (turning elements, lock, cylinder
and security rosette) and installation. This standard
provides a classification of security doors depending
on additional parameters to burglary resistance: clean
attack protection (without using physical force),
access control, access and attack detection, proper
installation and documentary control. The standard also
defines new test methods which consider the use of new
tools for manual attack and documentary evidence to
improve the protection of the lock device against skill
attacks, such as bumping, key copying or fast pick
locking. These additional parameters are broken down
into different levels of protection. The standard
includes the physical adjustments to incorporate
sensors that can be connected to intrusion alarm
electronic systems and it gives maintenance
recommendations for security doors. This standard does
not apply to strongroom doors and strongrooms included
in the scope of EN 1143-1. The standard neither applies
to security doors including electrical or electronic
locks as primary lock device, which are used for remote
access control functions.

TITLE : Pedestrian doors for operating rooms, cleanrooms and controlled environment rooms.

TITLE AMPLIF.: This standard specifies requirements for the design, construction, installation and maintenance of pedestrian doors, powered or manual, designed to give access to operating rooms, cleanrooms or controlled environment rooms. This standard is intended to be used by buyers, suppliers and operating rooms, cleanrooms and controlled environment rooms designers. When proposing any deviation from this standard, an agreement should be reached between the owner, the manufacturer and the installer of the door, stating the justified reasons of the deviation. This standard does not cover other requirements, different from the air quality of cleanrooms, for example, fire resistance / smoke control and use in explosive atmospheres.

TITLE : Anchoring systems on the roof - Guide for the
identification, configuration, installation, operation
and maintenance

TITLE AMPLIF.: The standard provides guidelines for configuring anchor
systems on the roofs and for their use for protecting
against falls from a height through fall arrest
systems. The standard does not provide criteria for the
installation of collective means of protection, which
are eventually used in conjunction. It also provides
information that can be used to prepare the document
for risk assessment and the subsequent definition of
preventive and protective measures and personal
protective equipment (Roofing Technical Paper), as
required by the legislation in force. The standard
indicates a methodology for assessing risks in work at
height when fall arrest systems are used against the
risk of falling. The standard does not exempt from the
need to compare the information which are concerned
with the real conditions and protection exigencies of
each specific work environment. The task of protecting
against residual risks that are not arising from the
risks of falling from height, must be entrusted to an
additional personal protective equipment.

TITLE : Vegetative roofs - Definitions, characteristics and
test methods - Resistance to fire, water retaining
capacity and resistance to actions by wind
TITLE AMPLIF.: A national work item is started in relation with
performance criteria and determination methods for
vegetative roofs in the field of resistance against
wind and fire, hydrological properties, binding
particulate matter and the prevention of urban heating.

TITLE : Soils from waste - Part 1: Fractional analysis -
Methods of analysis
TITLE AMPLIF.: ÖNORM S 2122 is applicable for the determination of the
input materials, the input control, process control,
quality control, quality requirements and the
application of soils from waste. This includes mixtures
of suitable materials for the production of the soil as
well as the product manufactured in a solification
process. This Part 1 is followed in the investigation
of both soils from waste (endproduct of humification)
and the input materials (e.g. including excavated soil)
and of intermediates of the solification method.

TITLE : Photovoltaics in buildings
TITLE AMPLIF.: This document applies to photovoltaic modules used as
building components. It focuses on the properties of
these photovoltaic modules relevant to essential
building requirements as specified in the European
Construction Product Directive CPD 89/106/EEC, and the
applicable electro-technical requirements as stated in
the Low Voltage Directive 2006/95/EC / or CENELEC
standards. This document only references international
standards and guidelines. For some applications in
addition national standards (or regulations) for
building products may apply in individual countries,
for which prevailing, harmonized European standards are
not yet available. The document is addressed to
manufacturers, planners, system designers, installers,
testing institutes and building authorities.

NATIONAL REF.: 170509473
TITLE : Information technology - Service management - Part 4:
Process reference model (ISO/IEC TR 20000-4:2010)
TITLE AMPLIF.: This part of ISO/IEC 20000 defines a process reference
model comprising a set of processes, described in terms
of process purpose and outcomes that demonstrate
coverage of the requirements of ISO/IEC 20000-1.

sub-committees
ORGANIZATION : ASI REGISTRATION DATE: 2012-11-14
COUNTRY : Austria
PROJECT ID. : 00025337/0001 NEW PROJECT

NATIONAL REF.: 170509491
TITLE : Information technology - Service management - Part 5:
Exemplar implementation plan for ISO/IEC 20000-1
(ISO/IEC TR 20000-5:2010)
TITLE AMPLIF.: This part of ISO/IEC 20000 gives guidance on a phased
approach to implement an SMS that fulfils the
requirements specified in ISO/IEC 20000-1. The phased
approach provides a structured framework to agree
priorities and manage the implementation activities.
This part of ISO/IEC 20000 illustrates a generic,
three-phase approach to manage the implementation. The
service provider can tailor the phases to suit its
needs and its constraints. This part of ISO/IEC 20000
can also be used with ISO/IEC 20000-2, ISO/IEC TR
20000-3 and ISO/IEC TR 20000-4.
